

This list contains summer and/or fall flowering rare plants of California's deserts as reported in the CNPS Inventory. This is by no means an exhaustive list, and full spring and summer/fall botanical surveys performed after suitable local rainfall may be necessary to assess a project's potential impacts to botanical resources. Desert rare plants that are reported to flower between July and November are included on this list. Plants that are known to flower only between late June/July and November receive a "yes" in the "Only flowers in summer/fall column?". Many of these plants are likely to go undetected in spring (March to mid-June) botanical surveys. All information in this table is publically available via the Online CNPS Inventory of Rare and Endangered Plants (7th edition) (<http://www.cnps.org/cnps/rareplants/inventory/>).

This list contains summer and/or fall flowering rare plants of California's deserts as reported in the CNPS Inventory. This is by no means an exhaustive list, and full spring and summer/fall botanical surveys performed after suitable local rainfall may be necessary to assess a project's potential impacts to botanical resources. Desert rare plants that are reported to flower between July and November are included on this list. Plants that are known to flower only between late June/July and November receive a "yes" in the "Only flowers in summer/fall column?". Many of these plants are likely to go undetected in spring (March to mid-June) botanical surveys. All information in this table is publically available via the Online CNPS Inventory of Rare and Endangered Plants (7th edition) (<http://www.cnps.org/cnps/rareplants/inventory/>).
